## Summary wolf and dog kills

- Often more than one domestic animal killed, some may be wounded but still alive
- Wolves consume quickly their preys, dogs seldom consumed the animals
- Large claw scratches are rarely visible, if present then rather superficial
- Animal killed with bites in the throat
- Dog bites rarely perforate the throat
- Tissue often strongly torn to pieces (shaking)
- Often bite injuries in the region of the belly, the legs and the articulations (often without perforations in the case of dogs)
