

González-Abarzúa M. C. G., Kunde M. N., Fitri M. S. & Goossens B. 2021. First capture of a flat-headed cat in an oil palm plantation in Sabah, Borneo. *Cat News* 72, 37–38. Supporting Online Material.

SOM T1. Body measurements taken from the flat-headed cat.

Body measurements	cm
Total length	56
Head length	10
Head-body length	43
Tail length	13
Thorax circumference	17.5
Neck circumference	12.5
Head circumference	16.8
Height R shoulder	22
Right front pad width	3
Right front pad length	3.1
Right hind pad width	2
Right hind pad length	3.5
Right upper canine	0.5
Left upper canine	0.5
Right lower canine	0.7
Left lower canine	0.7

SOM F1. Pole net used for trapping. The trapping is carried out by three persons, each carrying a pole net, walking through the plantation at night and spotting the eye shine of the cats. When an animal is spotted, it is surrounded and netted by one member. The animal is then quickly anaesthetised. This method is designed for trapping leopard cats in plantations and performed by experienced research assistants, following an approved DGFC standard operations procedure.
