Project Goals and Methods:

Abstract: The breeding populations remain stable, and seem to react to several rabbit projects. Two lynx scats in Sierra Morena mountains outside the Andujar-Cardeña area, and four scats in to diferent places in Montes the toledo area, have been localized. The rabbit reintroduccions are getting improved, and the manual is almost done.

Project Goals: Control the breeding population of lynx. Keep searching for other populations or "goast" individuals and make a manual of reintroduction for rabbits

Project Methods: Sign survey with scats molecular analisis, camera trap surveys for lynxs. Lettring surveys,scats counting, and sight-seing transects for rabbits
